

Your Preset Diary

As technology evolves, so does our Internet radio service provider.

To offer you the best service, we will switch our provider for **Evoke C-F6** and **Evoke F3** to Frontier Silicon Nuvola through an automated update at the **beginning of calendar week 37**.

Frontier has been a provider of SmartRadio solutions for ten years, enabling consumer audio brands like Pure to build hundreds of radios combining DAB / DAB+ / FM and the Internet. With the decision to switch the Internet radio portal of the Evoke C-F6 and Evoke F3 over to Frontier Silicon Nuvola, these products will receive the same perks as our newer models- a stable and, more importantly, bigger selection of available Internet radio and podcast sources to enjoy from the comfort of your home.

To allow a clean setup of the update and the switch-over to Frontier Silicon Nuvola, you will need to perform a factory reset. After the factory reset and the switch-over, **you will need to save your presets and alarm settings anew**. To keep all your favourite presets and settings collected over time, we have created a **form for you to fill out with all the names of your stored stations and settings ahead of calendar week 37**.
